## Water Control Emulsifier

**AQUABAN** represents an industry-recognized, proven method for the rapid absorption and emulsification of water from oil storage tanks.

**AQUABAN** is a highly concentrated composition of proven, highly active solvents and emulsifiers that work together to effectively provide these critical functions:

- ◆ Eliminating water accumulations that contribute to slime and fungus
- ◆ Inhibiting moisture due to condensation
- ◆ Minimizing potentially harmful effects of water deposits, such as corrosion, oil line freeze-ups, ignition and combustion failures
- ◆ Lessening tendency for sludge and sediment formation
- ◆ Optimizing combustion performance by supplying clean product to burner
- ◆ Avoiding flame-outs and unnecessary service calls
